

26/05/2021.

Dear Sir/Madam,

**Recommendation for Mr Farhaan Beeharry Mohammad Sa'ad**

Farhaan has been one of my students during his last academic year for Artificial Intelligence module. His academic performance has been highly satisfactory, demonstrating also highly prized social aptitudes. The AI module required implementing algorithms in Java. At the start of the year, I cross checked all students' basic proficiency in Java, and I can assert that Farhaan will be able to code in this language on a production basis very quickly. He worked upon assignments such as finding the most adequate algorithm for hand-written character recognition using deep learning based methods. During our class discussions, Farhaan has shown capability at problem solving. Unsurprisingly, he has taken part in university coding competitions and his team ranked amongst the best.

He has also demonstrated excellent interpersonal skills in group works since he was involved in the LaunchTech club of Middlesex University. As such, he had to interact not only with students coming from various backgrounds, but also had to deal with various stakeholders while devising some solution to the problems of the more needy of our society.

I would highly recommend this student.

Regards,

Suraj Juddoo
